Hiring Team / Recruitment Department

Halliburton Energy Services

Basra, Iraq

SUBJECT: APPLICATION FOR PLANNING & CONTROL ANALYST (VACANCY ID: 210432)

Dear Hiring Team,

I am writing to express my strong interest in the **Planning & Control Analyst (210432)** position at Halliburton in Basra. With over 22 years of progressive engineering and analytical experience spanning project controls, capital planning, statistics, and IT division leadership within a major government infrastructure directorate, I offer a unique combination of technical STEM expertise and sophisticated cost-and-schedule control capabilities.

Throughout my career, I have excelled at leveraging project data sources—including approved business cases, baselines, and management plans—to analyze, interpret, and resolve variances across scope, schedule, and cost. My analytical approach is deeply rooted in my computer engineering background, allowing me to master complex enterprise workflows and data systems rapidly.

Some of my key professional achievements that align directly with the operational excellence required at Halliburton include:

- **Capital Planning & Budget Management:** Successfully directed capital planning and cost control operations for critical utility infrastructure, managing multi-year project portfolios and annual operational budgets exceeding **USD 500,000** with a consistent track record of on-time, on-budget delivery.
- **Cost Optimization:** Achieved a **20%+ reduction in operational costs** through strategic vendor management, meticulous contract negotiation, and procurement planning.
- **Financial & Operational Modeling:** Engineered a comprehensive PLC/SCADA automation business case and feasibility study (including complete WBS, schedule, and ROI analysis) that projected over **USD 1,000,000 in annual operational savings**.
- **Data Systems Agility:** Possess a proven ability to master specialized engineering and operations data platforms—such as **OpenWells** and other asset management databases—integrating complex datasets with ERP systems to deliver predictive decision-support dashboards to senior leadership.

As a native of Basra, I possess a deep understanding of local logistics, regulatory dynamics, and operational environments. Halliburton is renowned for setting the benchmark in oilfield services and project delivery. I am eager to apply my project controls expertise, analytical precision, and deep-dive problem-solving skills to help monitor, optimize, and steer Halliburton's projects toward maximum profitability and zero schedule slippage.

Thank you for your time, consideration, and review of my application. I welcome the opportunity to discuss how my background and technical capabilities can support your planning and control objectives in Iraq.

Sincerely,

Huda Abduladheem
